BUBBLE UI · DESIGN BOOK

Five landscapes. One interface.

ஐந்திணை

Sangam poetry sorts the world into five tinai, each a landscape with its own mood. The Bubble UI gives each one a whole environment: a ground and an ink, a way of moving, a living background and a figure that answers your hand. A Yazhi app should feel like where it belongs before a word is read.

பாலை · Palai | முல்லை · Mullai | குறிஞ்சி · Kurinji | மருதம் · Marutham | நெய்தல் · Neytal

Mist on the ridge. The mist parts where the pointer passes and closes behind it.

BUILDER DOCS · DRAFT V0

Bubble UI · குமிழ்

Bubble UI is the surface Yazhi apps live in: one conversation canvas, a tray of bubbles, and your Circle account in the corner. Every bubble is an agent or tool a builder made. It runs on a model on your own device when there is no internet, and on Adhan through yazhi-api when there is.

Components · கூறுகள்

The primitives every Yazhi app shares. Several exist to enforce a rule in the interface itself: a citation for every claim, an honest "I don't know", a person in front of every system change. Compose them into modules.

Modules · தொகுதிகள்

App-level blocks built only from components: cited answers, runbooks, the hint ladder, the verse reader, orders, the consent gate. Each lists the apps that use it and the rule it carries. Whole screens made from them are in pages.
